

Lecture 10: Non-pecuniary Returns to Education

Hammad Shaikh and Natalie Bau

Oreopoulos and Salvins Introduction

- So far, we have mainly focused on the returns to schooling in terms of income
- Educational attainment increases wages, but why?
1) Signaling 2) Human Capital
- Study focuses on non-monetary returns to education

Non-Pecuniary Outcomes

- Better decision-making regarding health care and prevention

$\uparrow \text{Educ} \Rightarrow \uparrow \text{Interpret health info.}$

- Better decisions about who to marry (and access to better partners)

$\uparrow \text{Educ} \Rightarrow \uparrow \text{Access to more educated partners}$

- Better decisions about parenting

$\uparrow \text{Educ} \Rightarrow \uparrow \text{more educated kids}$

- Consumption value of schooling (schooling is fun?)

Challenges to Measuring Non-Pecuniary Returns

Problem is $\text{Corr}(\text{Yrs Educ}, Y) \neq 0$

- Schooling is endogenous to other factors that affect non-pecuniary outcomes

$$Y = \beta_0 + \beta_1 \text{Yrs Educ} + \varepsilon$$

- Difficult to measure non-pecuniary outcomes

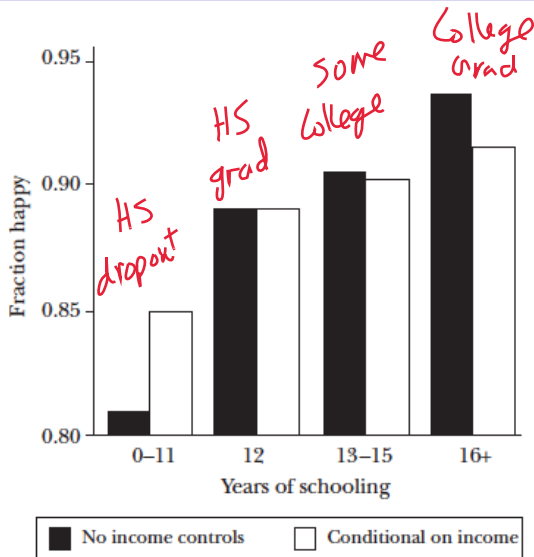

How to measure Happiness?

- Since schooling affects income, it's hard to tell if schooling is changing outcomes by changing decision-making

$\uparrow \text{Educ} \Rightarrow \uparrow \text{Income} \Rightarrow \uparrow \text{Happiness}$

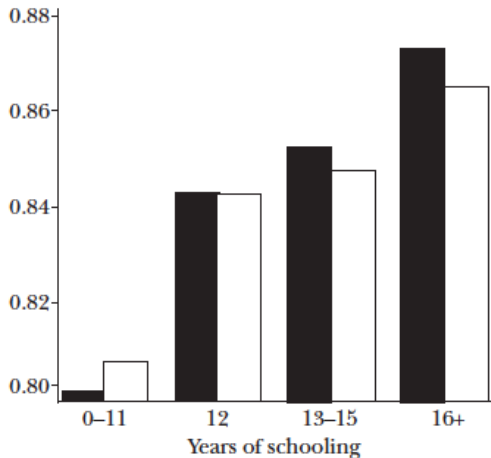

Educational Attainment and Happiness

↑ EDUC
⇓
↑ Happiness

Educational Attainment and Job Satisfaction

C: Satisfied with job
(fraction)

$\uparrow \text{educ} \Rightarrow \uparrow \text{job satisfaction}$
Better quality job

Educational Attainment and Non-labour Outcomes

↑ Educ.
⇒ ↑ Health

↑ Educ.
⇒ ↓ Divorce

↑ Educ.
⇒ ↓ Spank
Better parenting

■ Before conditioning on income □ After conditioning on income

Potential **Negative** Returns to Education

A: Always feel rushed

B: Want more leisure time

C: Want more time with friends

Costs

↑ Educ

↓
↑ Want more
leisure time

↑ Educ

↓
↑ Want time to
spend with
friends

Impacts of Educational Attainment

- Education is associated with more happiness and job satisfaction
- Education is associated with lower chance of divorce and less child spanking
- Education is also associated with negative returns to non-pecuniary outcomes
 - More educated people want more leisure time and also want to spend more time with friends

→ Above results are all "descriptive" and not "causal"

Strategy to Measure Causal Impacts of Education

→ Q1 Educ < Q2 Educ < ... < Q4 Educ

- 1 Compare outcomes across siblings and twins with different levels of education

{ ① Enter school in year turn 6

{ ② Dropout of school by age 16

- 2 Compulsory schooling laws as a instrument for educational attainment

Q1 = [Jan, March]

Q4 = [Oct, Dec]

$$Y = \beta_0 + \beta_1 \text{Yrs Educ} + \varepsilon$$

Z = Quarter of birth

Fixed effects

Causal Returns to Education from Siblings Strategy

Extra yr of educ yr ↑ in wage by 5% on avg.

	[1]	[2]	[3]	[4]	[5]
		Siblings sample		Twins sample	
Outcome	Mean	Change in mean from 1 year of schooling before conditioning on income	Change in mean from 1 year of schooling after conditioning on income.	Change in mean from 1 year of schooling before conditioning on income	Change in mean from 1 year of schooling after conditioning on income
Log annual income	12.0407	0.0517*** (0.0003)	NA	0.0476*** (0.0026)	NA
Unemployed (share)	0.07356	-0.0047*** (0.0001)	NA	-0.0047*** (0.0001)	NA

First child born when teenager	0.11167	-0.0083*** (0.0002)	-0.0071*** (0.0002)	-0.0041*** (0.0011)	-0.0372** (0.0012)

Causal Returns to Education from Compulsory Schooling

Outcome	[1]	[2]
	Mean	Change in mean from 1 year of compulsory schooling before income controls
Log weekly income	3.06	0.131 (0.006)***
Log occupational prestige score	3.27	0.063 (0.003)***
Unemployed (<i>share</i>)	0.045	-0.005 (0.002)***
On welfare (<i>share</i>)	0.019	-0.015 (0.002)***
In jail (<i>share</i>)	0.027	-0.006 (0.003)*
In mental institute (<i>share</i>)	0.003	-0.001 (0.000)*
Probability of dying within 10 years ^a	0.11	-0.037 (0.006)***
First child born when teenager (<i>share</i>)	0.078	-0.008 (0.002)***
Divorced (<i>share</i>)	0.137	-0.01 (0.002)***
Oldest child behind grade level (<i>share</i>)	0.199	-0.032 (0.004)***

IV approach

↑ 4rs EDUC.
⇒ ↑ income
by 13.1% on
avg.

Summary of Oreopoulos and Salvins

- Extra year of education increases wages by 5 to 13 percent on average
- More educated people on average will have more prestigious jobs
- More educated people on average will be less likely to divorce and have more educated partners
- More educated people on average are less likely to be on welfare or go to jail
